computar®

"computar" is CBC's Group's brand of industrial lenses for more than 40 years history. It currently secures the top share in the industry for the global market, providing not only high performance and high quality but also a rich lineup of product groups with excellent cost performance.

The research and development structure and distribution structure to properly understand the needs of many users, promptly develop excellent products that meet various uses and purposes and supply them to the market in each country of the world are also "computar" brand's major assets, with the background of the CBC Group's enriched global network.

1" 20MP
MPZ

- ✓ Ultra-high resolution lens, suitable for 1" 20 megapixel sensor
- ✓ Much lower distortion design for all models is beneficial for variety of machine vision applications
- ✓ The newest optical design, much higher relative illuminance compared to conventional models in spite of large format 1" sensor (Ø16mm)
- ✓ Vibration resistance up to 5G

MPZ Series

1" 20 MEGAPIXEL Machine Vision Lens

- ✓ Ultra-high resolution lens, suitable for 1.1" 12 megapixel sensor
- ✓ Enlarged image circle up to Ø17.6mm (1.1" sensor). The most compact, lightweight lens design on the machine vision market
- ✓ Floating design achieves ultra-high resolution in the whole range of near focus to infinity
- ✓ Vibration resistance up to 5G

Field of View = CCD Size / Optical Magnification

FLOATING

Basically, lens is designed to show the best performance at a certain working distance. Due to this design, a curvature of field* is caused at other working distances, and the picture deteriorates at the corners. This curvature of field is able to be modified by a method called Floating, which makes several lens element groups move differently and controls aberration. It can provide stable picture quality from short object distances to infinity.

*Curvature of field: Phenomenon caused by the gap of the focal point between center and corner

Standard Lens

Floating Lens

2/3" 6MP
MPW3

- ✓ Suitable for 2/3" 6 megapixel
- ✓ A variety of focal lengths from 5mm to 75mm
- ✓ Maintains high performance at long WD
- ✓ An ultra-compact Ø29 diameter with a nearly identical mechanical length
- ✓ Vibration resistance up to 5G

2/3" 6 MEGAPIXEL FIXED FOCAL LENS (MPW3 Series)

- Suitable for 2/3" 6 megapixel
- 5, 8, 12, 16, 25, 35, 50, 75mm 8 lens series
- Vibration resistance up to 5G

- Maintains high performance at long WD
- An ultra-compact Ø29 diameter with a nearly identical mechanical length

5 MEGAPIXEL FISHEYE BOARD LENS

1/2.5" 5MP IR FIX FISHEYE

- Compatible with 1/2.5" sensor • IR corrected • 5MP ultra-high resolution • IP66 (L1028KDRW)
- ImmerVision enables compatible

No.	Model Name	Format Inch	Mount	Pitch	Focal Length (mm)	Aperture (F)	Angle of view at Inf. (degrees)			Angle of view at Inf. (degrees)			Angle of view at Inf. (degrees)			Water Proof
							1/2.5"			1/3"			1/4"

1. Calculation of Working Distance (WD)

Distance from lens to object (WD) is calculated by putting the size of a camera's imaging device, focal length and an object size into the following formula.

<Formula>

$$WD = H1 + y \times f / y'$$

[Ex]

When 2/3" camera with M2514-MP films an object whose vertical size is 120 mm.

f : 25 mm

H1 : 26.77mm

y : 120mm

y' : 6.6mm

Distance from lens to object=

$$WD = 26.77 + 120 \times 25 / 6.6 = 481.32 \text{ mm}$$

2. Calculation of Focal Length

When choosing size of a camera's imaging device, the object size and WD are fixed, focal length can be calculated by the following formula. You can select appropriate lens from the focal length.

<Formula>

$$f = y' \times WD / y$$

f = focal length of lens

WD = distance from lens to object

H1 : first principal point

y : vertical size of object

y' : vertical size of camera's imaging device

CAMERA FORMAT

The size of camera's imaging device also affects the angle of view, with the smaller devices creating narrower angles of view when used on the same lens. The format of the lens, however is irrelevant to the angle of view, it merely needs to project an image which will cover the device, i.e.; the same format of the camera or larger. This also means that 1/3" cameras can utilize the entire range of lenses from 1/3" to 2/3", with a 1/3" 8mm lens giving the same angle as a 2/3" 8mm lens. The latter combination also provides increased resolution and picture quality as only the centre of the lens is being utilized, where the optics can be ground more accurately.

C OR CS MOUNT

Modern cameras and lenses are generally CS mount, with CS mount cameras both types of lenses can be used but the C mount lens requires a 5mm ring (VM400) to be fitted between the camera and lens to achieve a focused image. With C mount cameras it is not possible to use CS mount lenses as it not physically possible to get the lens close enough to the sensor to achieve a focused image.

	C mount lens	CS mount lens
C mount camera	○	×
CS mount camera	needs 5mm ring	○

FLANGE BACK, BACK FOCAL LENGTH, AND MECHANICAL BACK FOCAL LENGTH

(A) Flange Back

Distance between the lens flange and CCD focal plane

(B) Back Focal Length

Distance between the surface of the rear lens element and CCD focal plane

(C) Mechanical Back Focal Length

Distance between the surface of the lens frame and CCD focal plane

ASPHERICAL LENSES

Spherical lenses have constant refractive indices and are commonly used in almost all CCTV lenses. They are designed in such a way so that light passing through the glass and center of a spherical element should fall on a single point on the image plane, but causing some spherical aberration. This problem is resolved by the aspherical lens technology, enabling more light to pass through the element and to focus right on the same point as on the image plane. Supported by more advanced molding technologies, aspherical lenses eliminate the size constraints and improve the overall optical performance compared with more conventional CCTV lenses.

MECHANISM AND ADVANTAGEOUS EFFECT OF IR LENS

■ NON IR LENS

■ IR LENS

Day & Night cameras normally operate in the near-infrared / infrared zones at night, making the image "out of focus" and unsuitable if used with a conventional lens. Computar® has developed IR Lenses that utilize a special optical glass material which minimizes light dispersion. As a result, refocusing is not required when used with infrared lighting. The lens is manufactured with a special ED glass (extra dispersion) which does not widely disperse light of different wavelengths and with "special coating". This combination allows the lens to deliver perfect focus under normal lighting and also under IR illumination by transmitting more light to the infrared region.
